I. ABOUT THE INDEX

Rebuilding New Orleans and the Gulf area is costing billions of dollars and transforming the lives of millions of people. To benchmark the progress made in this effort, we have created this index of economic and social indicators that measure the impact of rebuilding efforts in Orleans Parish, the New Orleans metropolitan area, Louisiana, and Mississippi.

This information is designed to serve as an independent, fact-based, resource for leaders to monitor and evaluate rebuilding efforts. As of now, we intend to update the index once a month through December 2006.

Because rebuilding involves many different dimensions, we would like to invite any organization or government to share with us additional data that may be useful to this project. In the coming months, we fully expect to extend the length and comprehensiveness of this index.

At the same time, two local sources of data provide excellent, additional perspectives that should be taken into account when evaluating the rebuilding progress in the New Orleans area. The first, www.nola.com, has accumulated a vast archive of personal stories published by both displaced families and residents who have returned to the area. The second, the Greater New Orleans Data Center (www.gnocdc.org/) has accumulated excellent, neighborhood level data and will also be releasing information about displaced families. Both are terrific resources that complement the data presented in this index.

Finally, we would like to thank Michael O'Hanlon, our colleague here at Brookings. His "Iraq Index", which measures progress made in rebuilding Iraq, was the inspiration for this index. For more information, please refer to <http://www.brookings.edu/iraqindex>.

II. THIS MONTH'S SUMMARY OF FINDINGS

January 4, 2006 Summary

Days Since Katrina Made Landfall: 127

This month many of the key economic and social indicators moved in the wrong direction for New Orleans, Louisiana, and Mississippi. Among the numerous findings reported in this month's version of the index, we find:

1) Mortgage delinquency rates skyrocketed between the second and third quarter of the calendar year. In the state of Louisiana, for instance, nearly one out of every five prime-rate loans is now 30 or more days past due, and more than one in three sub-prime mortgage loans are now delinquent (for more information, see p18-20).

2) Unemployment rates continue to rise in Orleans Parish, the metro area, Louisiana, and Mississippi. In the metro area, for instance, more than one out every six working age adults was unemployed in November, the highest rate registered since Katrina made landfall. Mississippi also took a step backward, seeing its unemployment rate jump from 8.7 percent in October to 9.5 percent in November (for more information, see p6-17).

3) Most schools and hospitals in Orleans Parish remain closed. Only five percent of the schools are open in Orleans Parish, for instance, and only 32 percent of the city's hospitals are now open (for more information, see p40-45).

4) Buying food is still difficult to do in the metro area. Only about one out of every three retail food establishments (e.g., grocery stores, restaurants, convenience stores) is open in the metropolitan area (for more information, see p41).

5) Personal income in Louisiana dropped 25 percent between the second and third quarter of this year, and increased by nearly 1 percent in Mississippi. Among other effects, this means Louisiana's state budget likely shrunk even while the need for the state's services substantially increased. Alternatively, Mississippi's budget was likely not affected by a change in personal income (for more information, see p23).

For the city of New Orleans, among the hardest hit areas, there are a few positive signs -- the number of open bus routes in Orleans increased, the amount of traffic in the area has increased, and there have been some recent, encouraging estimates of the population. But most of the key indicators moved in the wrong direction or not at all. The bottom line: it continues to be a very risky decision for many of the displaced households to return to the area, since all of the key necessities are in scarce supply, and it is not at all clear when or if they will be brought back online.

Meanwhile, federal spending has only modestly increased over the past month. At the same time, the number of displaced households has surged from over 600,000 to over 750,000. Although the number of households in trailers and mobile homes modestly increased, nearly all of this increase is the result of more families receiving FEMA's rental assistance. With New Orleans and Louisiana still facing massive economic and infrastructural challenges, it is likely that many of these households will need federal assistance for many months to come.

III. ECONOMIC INDICATORS

11/23/05	64%		50%
11/30/05	64%		50%
12/7/05	70%		67%
12/14/05	74%		72%
12/21/05	77%		74%
12/28/05	77%		75%

Note: Data for water service is not currently available. **ALSO, note that the service restored statistics reported by the mayor’s office does not mean that resident’s have access to these services, since many connections between houses and utility lines remain broken. As recently as January 1, 2006, Entergy (the utility that serves New Orleans) reported to the *Times Picayune* that service is being used by 40 percent of its former gas customers, and about 35 percent of its former electricity customers (cited from Gordon Russell, January 1, 2006, “Comeback in Progress,” *The Times Picayune*).**
