4. A 60 year old man with hypertension and diabetes has a baseline creatinine of 1.6 mg/dL. His blood pressure is 145/93 at this visit, and he was started on lisinopril. Two weeks later, he is found to have a blood pressure of 130/78, and a serum creatinine of 2.1 mg/dL. A repeat serum creatinine one week later is stable at 2.1 mg/dL. Which one of the following is the most appropriate course of action?

		Response Percent	Response Count
Discontinue the lisinopril	<input type="checkbox"/>	8.2%	39
Continue the lisinopril at the same dosage	<input checked="" type="checkbox"/>	76.1%	363
Increase the lisinopril	<input type="checkbox"/>	4.2%	20
Discontinue the lisinopril	<input type="checkbox"/>	4.6%	22
Assess and evaluate the patient for bilateral renal stenosis	<input type="checkbox"/>	6.9%	33

5. Which of the following antihypertensive agents is associated with favorable outcomes in patients with congestive heart failure?

		Response Percent	Response Count
Thiazides, Beta blockers, ACE inhibitors, Angiotensin II antagonists, Long acting dihydropyridine calcium channel blockers		7.8%	37
Thiazides, Beta blockers, ACE inhibitors, Angiotensin II antagonists, Short acting dihydropyridine calcium channel blockers		1.5%	7
Thiazides, Beta blockers, ACE inhibitors, Long acting dihydropyridine calcium channel blockers		1.9%	9
Thiazides, Beta blockers, ACE inhibitors, Short acting dihydropyridine calcium channel blockers		0.0%	0
Thiazides, Beta blockers, ACE inhibitors, Angiotensin II antagonists, Aldosterone antagonists		88.9%	424
	<i>answered question</i>		477
	<i>skipped question</i>		0

6. Causes of resistant hypertension can include:			
		Response Percent	Response Count
Patient use of aspartame, excess sodium intake, inadequate diuretic therapy, use of herbal supplements such as Ma Huang.		2.4%	11
Uncontrolled diabetes, excess sodium intake, inadequate diuretic therapy, use of pseudoephedrine.		5.5%	25
Improper BP measurement, excess sodium intake, inadequate diuretic therapy, use of oral contraceptive pills.		90.9%	412
Improper BP measurement, decreased protein intake, inadequate diuretic therapy, recent use of cocaine.		1.1%	5
